

PRE-ANESTHESIA SURGERY FORM
ANSWER ALL QUESTIONS COMPLETELY

Last Name: _____ **Pet's Name:** _____ **Procedure:** _____

Prior to placing your pet under anesthesia there are several options to consider regarding their comfort and safety. Risks are involved with every anesthetic procedure for all pets, but **the items listed below can help to reduce this**. Be aware that the items you select are in **addition** to the price of the procedure. Please read the following and ask any questions.

Procedure Requirements

Examination (\$55.00) - This is required for all new patients and for all pets that have not had a physical examination at My Family Vet within the last year. A full physical exam will be completed by the vet prior to the anesthetic procedure. This is to ensure your pet is healthy enough today to handle the anesthesia and the necessary procedure. This will assist the doctor in getting to know your pet and your pet's needs prior to the procedure.

- YES, I would like to have an exam performed today.
- NO, my pet has received an exam at your facility within the last year

Blood Work – It is required to have a pre-surgical blood profile performed on your pet before any procedure. We always use the safest form of anesthesia for your pet, but this profile can provide information about any pre-existing conditions your pet may have. Kidney and liver values, white blood count, red blood count, platelet counts and many other values are obtained and can determine if your pet is ready for the procedure.

- **Pre-Anesthetic Blood Profile (\$95.00)** This provides basic kidney, liver, glucose, protein and electrolyte values as well as an anemia screen. This is recommended for younger, generally healthy pets and pets that have never been under anesthesia.
- **Comprehensive Diagnostic Profile (\$155.00)** This provides a 12 value blood panel, complete blood count and electrolytes. This panel adds more information on the pancreas, gallbladder and cholesterol. This is highly recommended for ALL PETS OVER 8 YEARS OLD.
- NO, my pet has received bloodwork **within the last year**

Rabies Vaccine (\$25.00). If your pet is not current on the Rabies vaccine we will administer one in clinic the day of the surgery. With your pets safety in mind, we recommend all core vaccines to be current also. In order to protect our team and your pet, we **require** proof of Rabies vaccine the day of the surgery

- YES, please administer the Rabies vaccine to my pet he/she is not current
- NO, my pet is current on the Rabies vaccine and I have provided documentation

Intravenous Fluids (\$98.00) It provides an ability to replace blood volume loss, flush the body of injectable anesthesia medications, maintain blood pressure, keep hydrated and provide a direct line to the heart if needed during the procedure. This includes an IV catheter, extension set, and bag of fluids.

- YES, I would like my pet placed on IV fluids.
- NO, Please do not place my pet on IV fluids.

Take Home Pain Management (\$30.00-50.00) Your pet will receive an injectable form of pain medication during the procedure to ensure that they are comfortable upon the completion of the procedure. This will generally keep your pet comfortable for up to 12 hours post-surgery. Oral pain medications can be used once you get your pet home and are required for all surgeries.

General Health Questions:

1). When was the last time your pet had anything to eat? _____ drink? _____
2.) Please list any medications that you pet is currently taking: (including over-the-counter and homeopathic)

3.) Does your pet have any medical conditions (heart issues, seizures, etc) that we are unaware of? _____

Procedure Options

ECG (Electrocardiogram) Screening (\$50.00) Our ECG screen is performed with a monitor via telemedicine and read by a certified cardiologist. This information will enable us to detect if your pet has any abnormalities in the heart, such as a heart murmur. If detected, we can alter our anesthesia protocols and inform you of any necessary care for the future. This ECG is highly recommended for **PERSIANS, BOXERS, ROTTWEILERS, DOBERMAN, KING CHARLES SPANIELS AND ENGLISH BULLDOGS.**

- YES, I would like to have an ECG screen performed today.
- NO, Please do not perform an ECG today.

Cold Laser Therapy (\$30.00) The cold laser therapy is a noninvasive procedure that uses light to stimulate cells and increase blood circulation. At the correct laser wavelength, pain signals are reduced and nerve sensitivity decreases. The procedure also releases endorphins, or natural painkillers

- Yes, I'd like cold laser therapy performed on my pet today
- No, Please do not perform cold laser therapy on my pet today

Home Again Microchip Implant (\$48.00) A small chip is implanted in your pet underneath the skin, between the shoulder blades. All shelters and vet clinics scan found and lost pets and contact the owner if chip is found. This is an excellent method of getting your pet back if they are lost.

- YES, I'd like a microchip for my pet today.
- NO, Please do not microchip my pet.

PRE-ANESTHESIA SURGERY FORM
ANSWER ALL QUESTIONS COMPLETELY

- E-Collar (\$13.00-\$27.00)** This is a protective barrier made of a plastic material used to prevent your pet from damaging their incision.
- YES**, Send an E-collar home with my pet today.
 - NO**, Thanks.

Extract Deciduous Teeth (\$30.00 PER TOOTH)

Reasons to extract deciduous teeth (baby teeth)

1. After 6 months of age they WILL NOT fall out on their own
2. They can cause other teeth to become decayed
3. Many kinds of bacteria can occur between the deciduous and adjacent teeth
 - YES**, I'd like to extract any deciduous teeth that are present
 - NO**, Please do not extract any teeth

Vaccinations & Tests

- Feline Leukemia (**\$28.00**)
- Feline FVRCP (**\$25.00**)
- Feline Felv/Fiv Snap Test (**\$65.00**)
- Feline/Canine Fecal (**\$36.00**)
- Canine DHPP (**\$25.00**)
- Canine Bordetella (**\$25.00**)
- Canine Lepto (**\$25.00**)
- Canine Heartworm Test (**\$38.00**)
- Please update my pets vaccinations as needed (**price depends on needed vaccines**)
- My pet needs Prevention against Heartworms, Fleas, Ticks, and Internal Parasites.

I have reviewed the above material and I authorize the use of appropriate anesthesia and other medications needed today. I understand that during the procedure unforeseen conditions may necessitate an extension of the foregoing procedure(s). Therefore, I hereby consent to authorize the performance of such a procedure(s) as are necessary and desirable in the excise of the veterinarian's judgment. I have had all my questions answered and fully understand the procedures to be performed today. I hereby state under penalty of perjury that I am the owner/agent of the above pet and do authorize the associates of My Family Vet, PA to perform the above said procedure.

We here at My Family Vet thank you for giving us the opportunity to care for your pet, and want you to know that we do not take this responsibility lightly. The staff at My Family Vet will make every effort to prevent complications arising from your pet's illness/injury or from procedures carried out in our hospital. However, in some cases, there is risk that your pet may experience respiratory and/or cardiac arrest while hospitalized. We are fully prepared should an emergency event occur and want to be aware of your wishes when caring for your loved one in order to meet both your emotional and financial needs.

We are requesting that you choose whether or not you want us to revive your pet in the unlikely event that your pet experiences respiratory and/or cardiac arrest.

If a pet arrests, there is a short and critical window of opportunity to initiate CPR beyond which the success rate of cardio-pulmonary resuscitation decreases significantly. By selecting now, we will be able to initiate our efforts without delay. Once we have initiated CPR, we will contact you to make further decisions.

CPR --- I wish the staff to perform resuscitation (CPR) on my pet if my pet suffers from cardiac arrest, respiratory arrest, or collapse

DNR -- I DO NOT wish the staff to perform CPR on my pet. I understand that if my pet suffers from cardiac arrest, respiratory arrest, collapse or unconsciousness if CPR is not performed, my pet will pass away.

Signature of Owner/Agent

By signing one of the above, you grant permission to My Family Vet to perform the option you selected. You also understand that no guarantee can be given or will be implied as to the outcome of treatment.
